A Case Study On

DUNZO

Improving the Order placing journey

Problem Statement

Dunzo Daily has been the predominant offering bringing in the largest chunk of your company's revenue. You feel you can further improve the order-placing journey for your users, making it more frictionless at each step, so that Dunzo becomes the go-to platform for users, who wish to order anything under the sun.

The Goal:

To launch a few new features or enhance the current features on the current app to make the order placing journey of the users smoother and richer.

About Dunzo

User Personas

Sameer, 28 years
Bangalore
Working Professional

Behavior:

Sameer usually orders his groceries and home necessities using Dunzo. He is known to be forgetful about the things he has to order. Hence, when he remembers about something, he has to note it down or add to cart at that moment.

Pain Points:

- Forgets about the products to order.
- No proper way of noting down or listing the products to be ordered.
- Going on the app to search product add the products to cart is not always a viable option as and when he remembers.

Ragini, 34 years
Hyderabad
Working, and a mother

Behavior:

Ragini is a mother to an infant and works from home. She orders her groceries online as she rarely has the time to go out. Sometimes she forgets to place her order as she is always occupied either with work, or her baby. She prefers to have the orders delivered at the door without having the delivery partner call her, as she keeps busy and does not like being disturbed.

Pain Points:

- Needs reminders to order her groceries as she often forgets.
- Would like to have the option to give instructions to the delivery partner about how to deliver the order.

Mohit, 22 years
Delhi
Student

Behavior:

Mohit is a student and is accommodated at the college hostel. He uses Dunzo often for getting his supplies and for his late night cravings. Sometimes the products are not available. He does not like to open the app again and again to check the availability. He prefers knowing the cancellation policy before he places the order as well.

Pain Points:

- Has to open the app again and again to check the availability of a product.
- At times, he would entirely forget about that product.
- Knowing the cancellation policy is important before placing an order.

User Journey - Sameer

Motivation:
The user opens the Dunzo app multiple times to add items to the cart, even when they are busy just so that they do not forget it. They have to browse the product, select a brand and quantity too.

Expectation:
Hopes there was a way to create a wishlist of the items he/she wants to buy later, instead of having to browse the app every time.

Opportunity:

- To create a feature that enables the users to wishlist the products they want to buy, preferably without having to open the app.
- With this, the users will not have to browse the products on the app when they are busy.

User Journey - Ragini

Motivation:

The user wants to order some items urgently.

Expectation:

Hopes there is way to get a reminder to order the items that they want.

They also wish to be able to add delivery instructions while placing the order.

Opportunity:

- To create a notification system to remind the user to order the products.
- To allow the users to add delivery instructions while placing the order according to their convenience.

User Journey - Mohit

Motivation:

The user opens the Dunzo app again and again to check if the items are available which were out of stock before.

Expectation:

Wish to be notified when the item they want gets restocked, instead of having to check the app repeatedly.

They also wish to know the cancellation policy before they have placed the order.

Opportunity:

- To create a notification system to notify the users when the items they have been looking for has been restocked.
- To educate the users about the cancellation policy before placing the order, so that they can take an informed decision.

Feature 1: WHATSAPP ASSISTANT

This feature will allow the users to use whatsapp as an assistant for managing shopping lists and setting reminders for placing order on Dunzo.

- The whatsapp chat will have a list of commands like 'Create list'. The user can select this option and just text the items they want to buy later.
- They can also set reminders for 1,2 6 hours or customizable time and whatsapp will send a reminder at the set time for placing the order.
- When they want to checkout, they will be directed to Dunzo, where they will have suggestion for each item in the list.

Value for customers:

The customers will have an easy and efficient way to create a wishlist without having to open the app and go through the process of selecting a brand and quantity and adding to cart.
Users will now not forget to place orders.
Since the maximum % of users belong to the age of 18-40, this age group is already well versed with using whatsapp.

Value for company:

- Provides the users with a hassle free experience of ordering.
- The users will positively place their orders and the brand will not lose any order value.

Impact of this feature:

>85% users belong to the age group of 18-45.
This age group predominantly has working professionals and students.
This feature will be helpful and easy to use for this entire group.

Metrics for this feature:

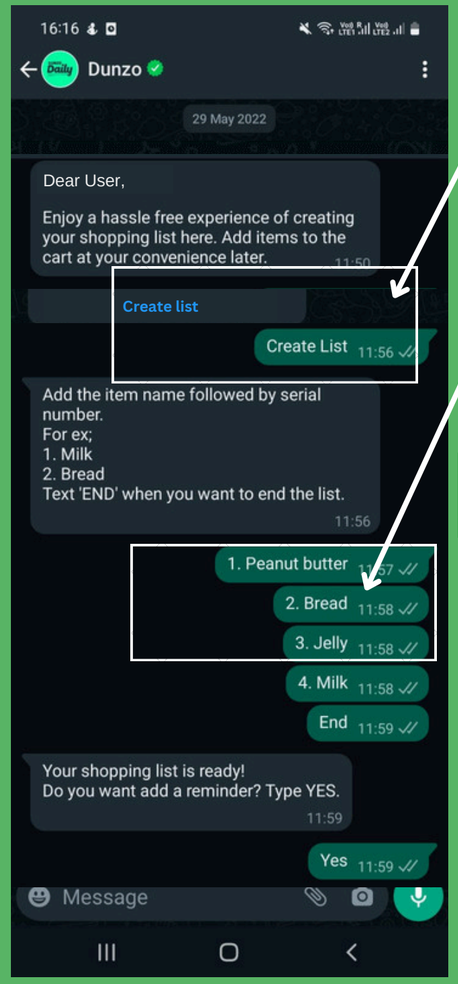

- # of users using the whatsapp assistant.
- Change in the # of orders placed per user per week.
- Average time of idle cart per user.
- # of reminders set per user per week.
- Avg time between initiating shopping list to converting into a checkout.

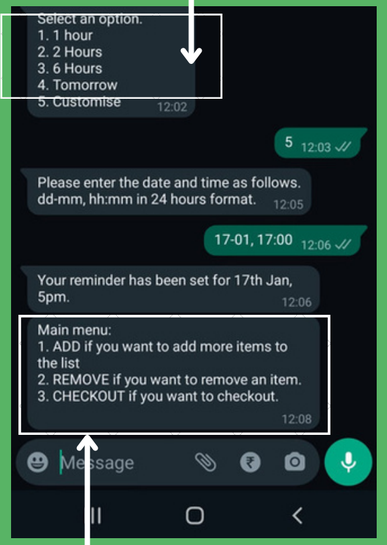

Feature 1: WHATSAPP ASSISTANT

The user clicks on 'Create List' and a text is automatically sent.

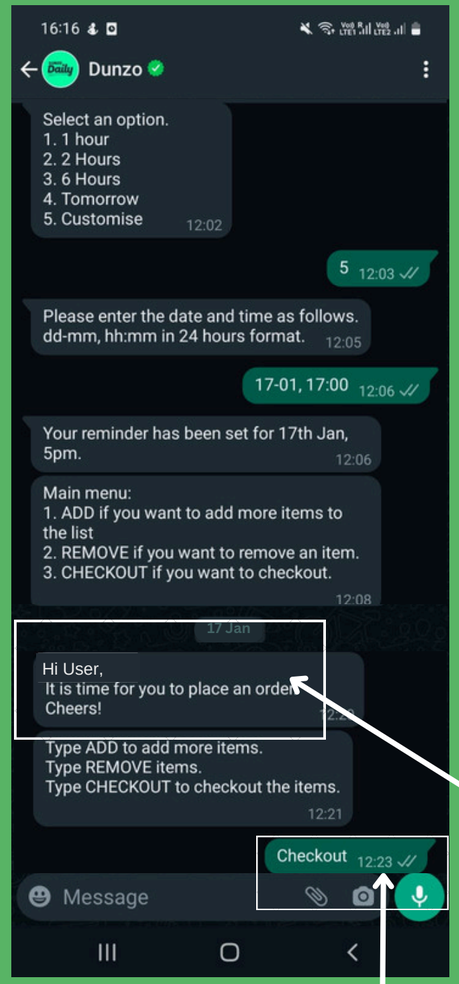

Users can text item by item and they will be added to the list.

Setting reminder

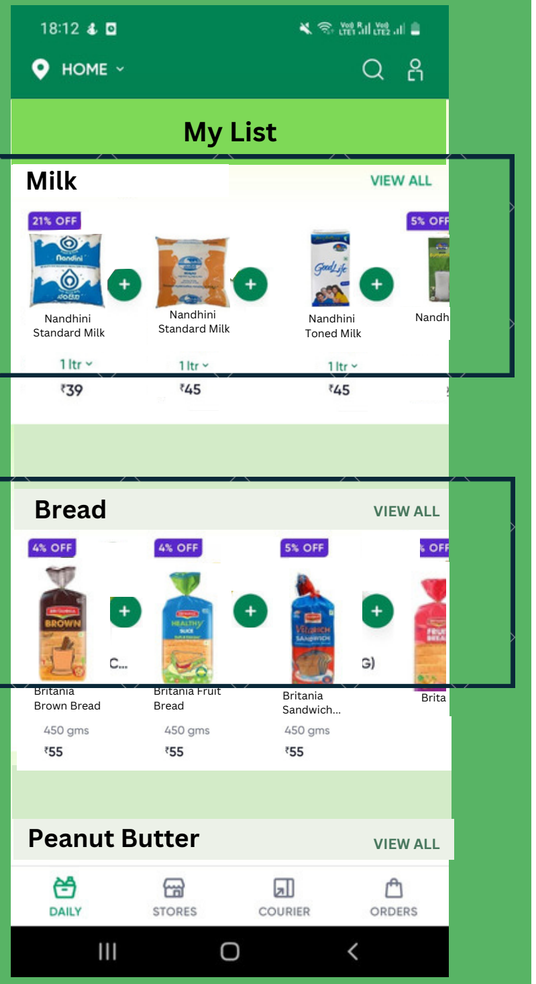

Users can select any of these options to either add, remove or checkout items.

User selects to checkout, they will be taken to Dunzo app directly, where all the items will be listed.

User gets a reminder at the set time to place the order.

List is available for each product and users can add to cart from this page and proceed to checkout.

Feature 2: ADDING DELIVERY INSTRUCTIONS

This feature will allow the users to add delivery instructions at the time of check out.

- 'Don't call', ' Leave delivery at the reception or with the security', 'Don't ring door bell', are the three options that will be added in the check out page.
- Users can select any one of the options.

Impact of this feature:
>85% users belong to the age group of 18-45.
This age group predominantly has working professionals and students, who spend a lot of time outside or are working from home and keeping busy. This feature will be used by this group predominantly.

Value for customers:
The customers can customize their orders more as per their convenience, there by enhancing their experience.

Value for company:

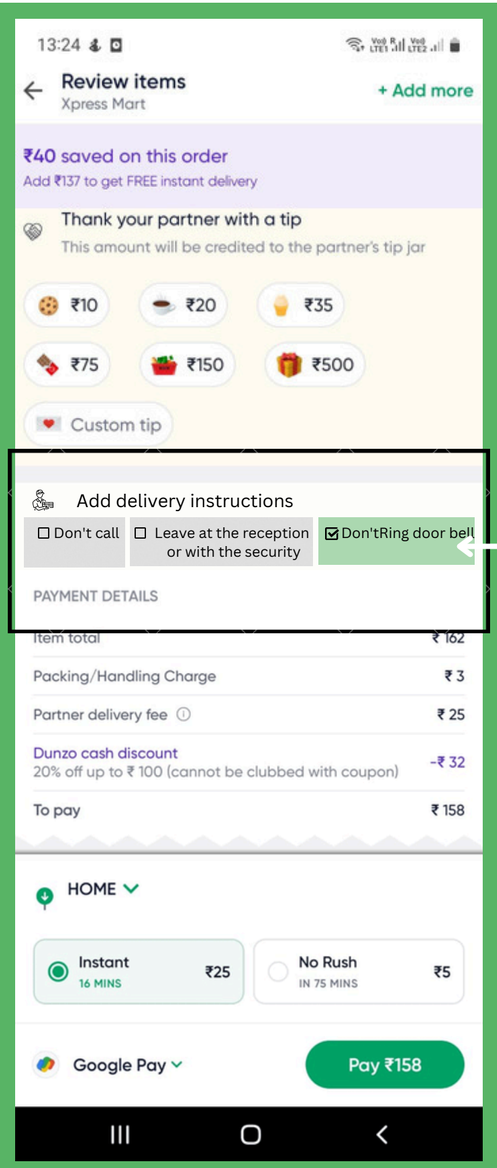

- Reduction in unsuccessful deliveries and customer complaints.
- Enhances user experience, thereby increasing their stickiness to the app.

Metrics for this feature:

- Ratio of successful deliveries to successful orders placed.
- # of orders placed with any one of the delivery instructions chosen.

Delivery instructions section

The delivery partner will call if none of the boxes are checked by default.

Check any of the three options.

Feature 3: AVAILABILITY NOTIFICATION

This feature will notify the users when an item they have been looking for has been restocked.

- When an item on the Dunzo app shows that it is out of stock, there will be an option to enable notification for when the item gets restocked.
- The users can enable the notification and they will be notified in due time.

Impact of this feature:

This will increase the stickiness of the user with the app.

Value for customers:

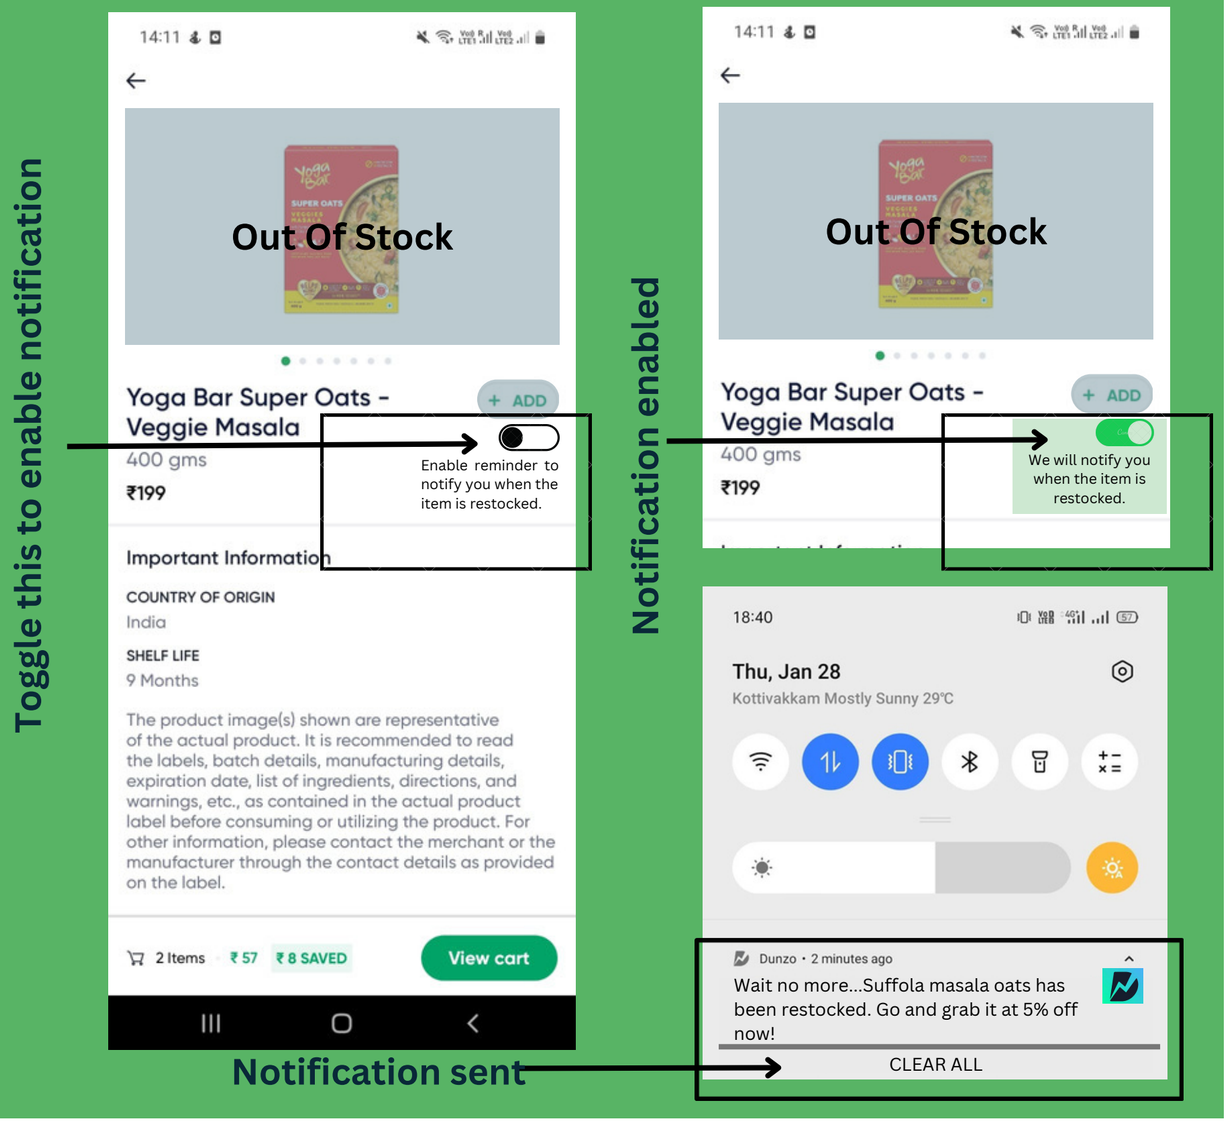

The customers will get notified about their product, they will not have to open the app again and again to check.

Value for company:

- Provides the customers with a richer and personalized experience.
- Leading to stickiness and retention of the user.
- Increase number of orders.

Metrics for this feature:

- # users enabling the notifications for out of stock products.
- Avg time taken by users to order the item that had been restocked since the notification was sent.
- # orders placed after availability notification sent/Total availability notifications set.

Feature 4: ADDING CANCELLATION POLICY

The addition of this feature will educate the users about the cancellation policy before they have placed the order.

- On the checkout page, the cancellation policy will be clearly mentioned.
- According to the cancellation policy, order can not be cancelled after the order is packed.
- A progress bar will be shown counting down till the time cancellation is possible.

Impact of this feature:

This feature will be used by all the age groups.

There will reduce enquiries and complaints about cancellations and status of the orders placed.

Value for customers:

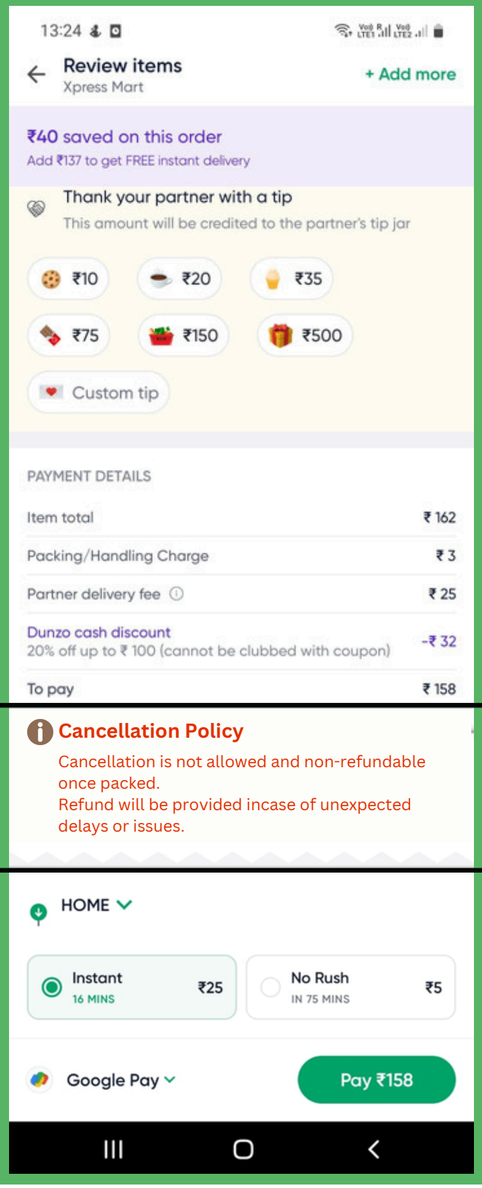

The customers will be aware of the cancellation policy before placing the order. They will be able to make an informed decision.

Value for company:

- Provides the customers with a richer experience.
- Reduction in number of complaints and enquiries leading to stickiness and retention of the user.

Metrics for this feature:

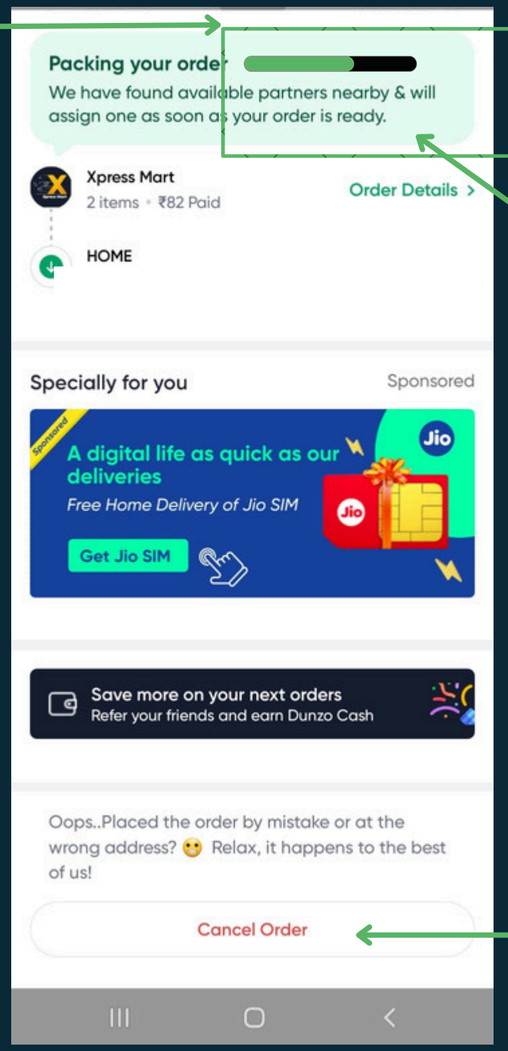

- # cancellations in a month since the feature's addition (should not have gone up).
- # of enquiries and complaints raised about cancellation of orders in a month since the addition of the feature.

The cancellation policy will be visible to the users on the checkout page.

Feature 4: ADDING CANCELLATION POLICY

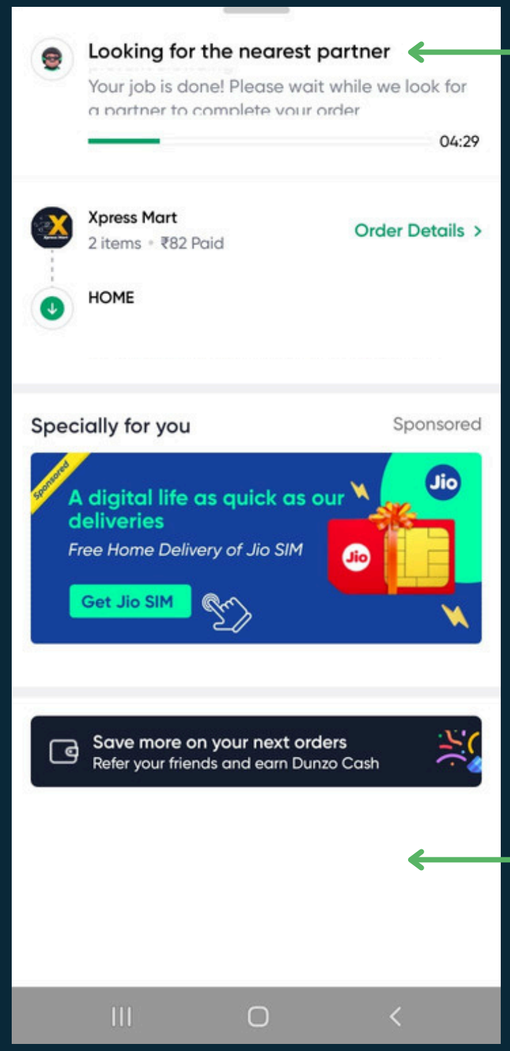

This progress bar will be shown while the order is being packed.

The movement of the progress bar is based upon

1. The average time time taken for packing an order.
2. The number of orders queued ahead of this order.

The cancel button is available until the order gets packed.

Once the order gets packed, the progress bar is removed.

The button to cancel the order also gets removed.

PRIORITISATION OF FEATURES

	Reach	Impact	Confidence	Effort	RxIx(5xC%) E	Priority
Delivery Instructions	4.5	3.5	80 %	2	31.5	1
Whatsapp Assistant	4.5	4.5	85%	4	21.5	2
Availability Notification	4	3	70%	2	21	3
Cancellation Policy	5	2.5	75%	3	15.6	4

GTM STRATEGY

Research	Extensive market and development research to find out all the potential risks. Also, includes competitor analysis, funnel analysis.
Development	Developing and adding features to existing application (delivery instruction), whatsapp assistant, etc, considering various user stories.
Beta Launch	Release the whatsapp assistant feature to the frequent users of the age group 18-40, and the rest of the features to the entire 18-40 age group. Analyse the success of these features by monitoring the various success metrics.
Feedback	Get the feedback from the users on their experience on the new features. Refine the features by doing an in-depth analysis and research. Check for exit criteria for the different features at this stage and plan accordingly.
Marketing	At this stage, market the new features to popularize the new additions among the users.
Final Release	Finally release all the features to pan-user base and monitor the success by tracking the metrics for each. Also, check if the release of the new features have affected the performance of any existing feature or not.

THANK YOU
